

ITFM Use Case: Decisionable Insights

How Arizona Pivoted to a More Modernized TBM Approach to Drive a More Mature Chargeback

Rob Mischianti

Chief Evangelist

Agenda

- The Problem Statement
- Goals for Arizona IT
- Billing Maturity
- Service & Rate Development Maturity
- Q&A

Use Case: Problem Statement

Problem Statement

Billing:

- ✓ **3+** months behind in billing
- ✓ **17%** of budget not collected/behind (inaccuracies & missing data)

Rates:

- ✓ Lack of transparency hinders changes to services and rates
- ✓ Lack of speed limits volume of change

What They Had Been Doing

- ✓ Manually managing data, sometimes inconsistently and inaccurately
- ✓ Struggling to communicate transparency and get rates approved

What They Needed

To centralize and automate data collection and validation and realign their efforts to focus on evolving their billing to align with new innovative technologies that are being introduced to the state.

Arizona's Goals for Modernization

Desired Goals & Outcomes for Arizona for Cost Modeling & Rate Design

Empower Service Owners and IT Leadership to adopt, manage, and predict financial and operational footprints for technology

What-if Modeling & Analytics to project the impact of expense pressures and/or volume changes both internal to ASET and to the Agencies

Enable Predictive Models in support of new technology adoption and services regardless of whether they are new to Arizona or already exist

Drive Maturity for the State of Arizona's IT Cost Modeling, Rate Design, and Billing toward best-in-class capabilities on par with those in the commercial industries

Monthly Reporting for Services to support analytics and communication of IT Optimization and Value to the Agencies

Our Mission: Goal State

What is our desired Goal State?

We want to **Reduce the Time Effort** required from our service owners and **Drive Maturity** by enabling them to manage their service delivery like a business by **Automating Data Entry** and leveraging the native functionality to enable **Multi-Year Projections, Monthly YTD/Trending Reporting, and What-If Analytics** through automated processing and dashboards for IT and the Agencies.

We Want to Drive

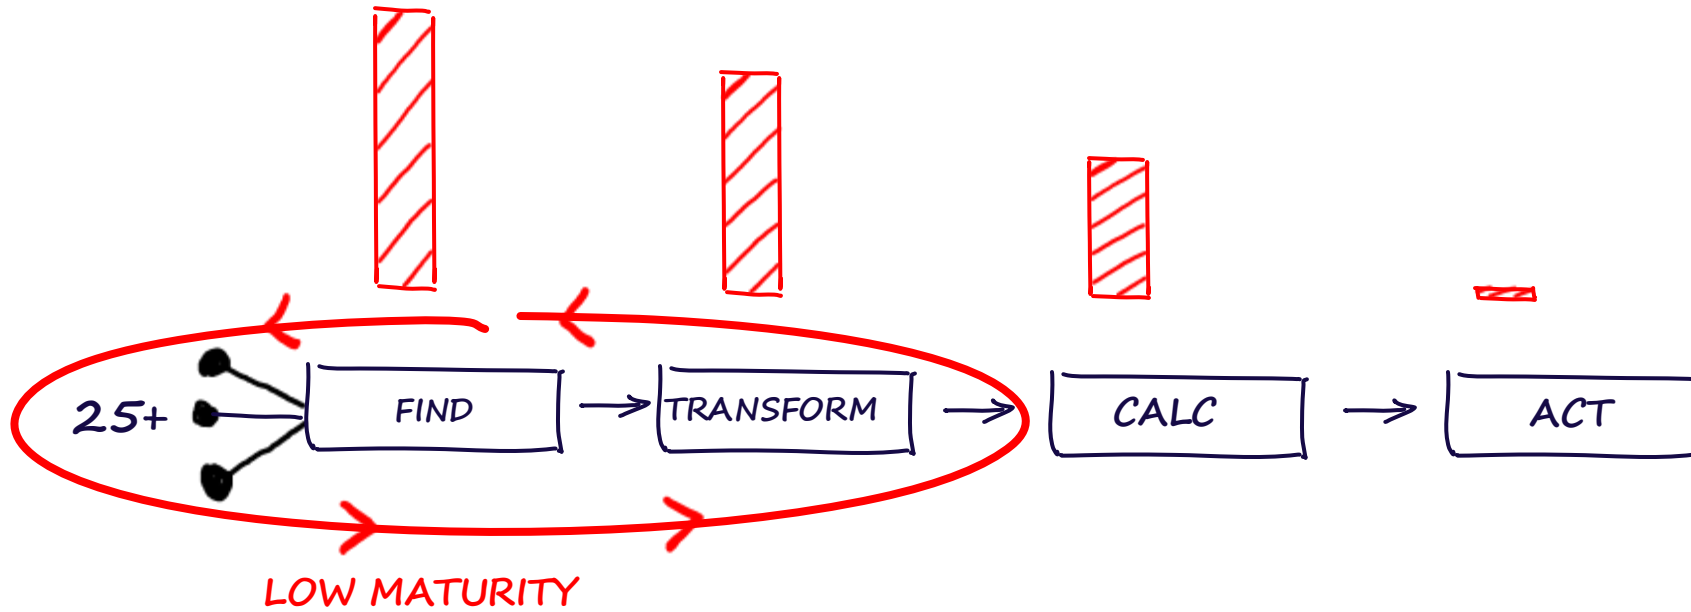

- ✓ Time Savings for Service Owners
- ✓ What-If Scenario Analytics
- ✓ Service Owner Accountability
- ✓ Multi-Year Projections
- ✓ Enhanced Vendor Management
- ✓ Rate Based Analytics
- ✓ Increased Financial Maturity
- ✓ Automating Data Feeds
- ✓ Reporting on IT Optimization
- ✓ Greater Transparency for Agencies
- ✓ Greater Transparency for Executives

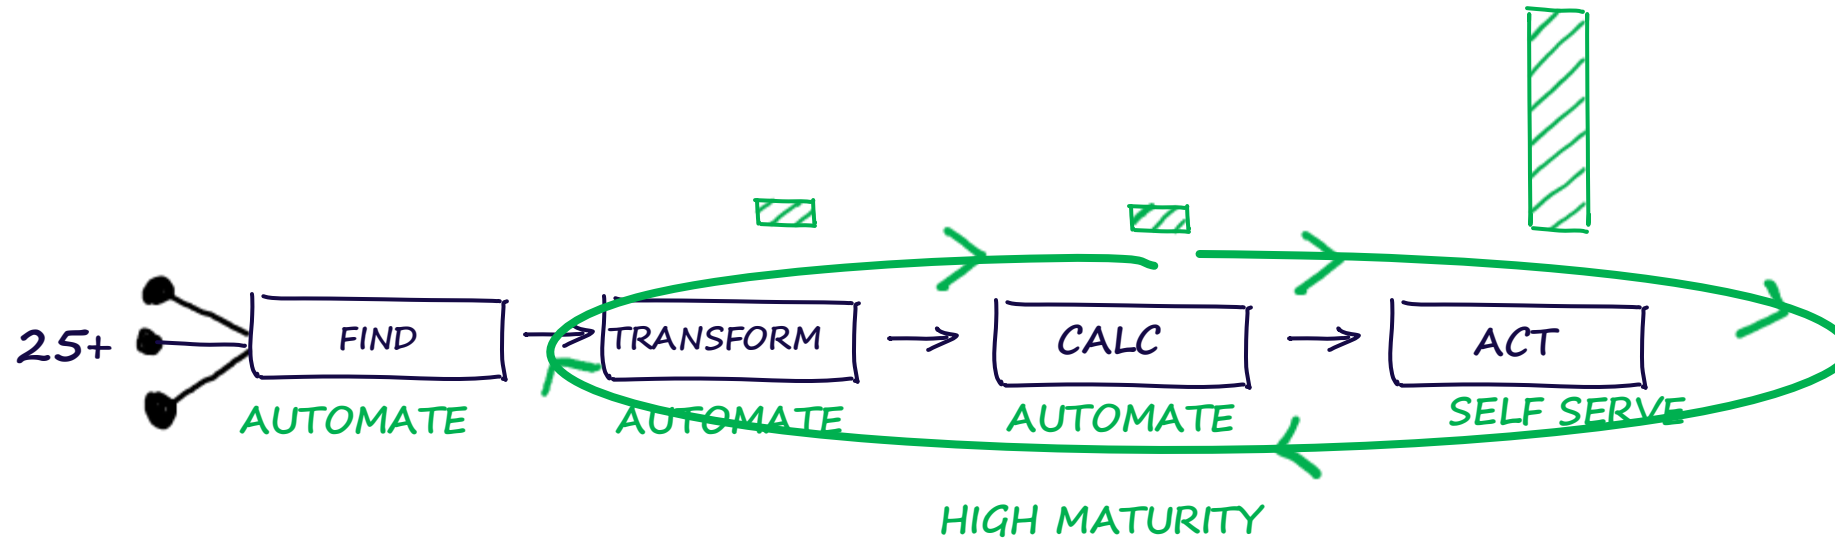

IT Chargeback Maturity

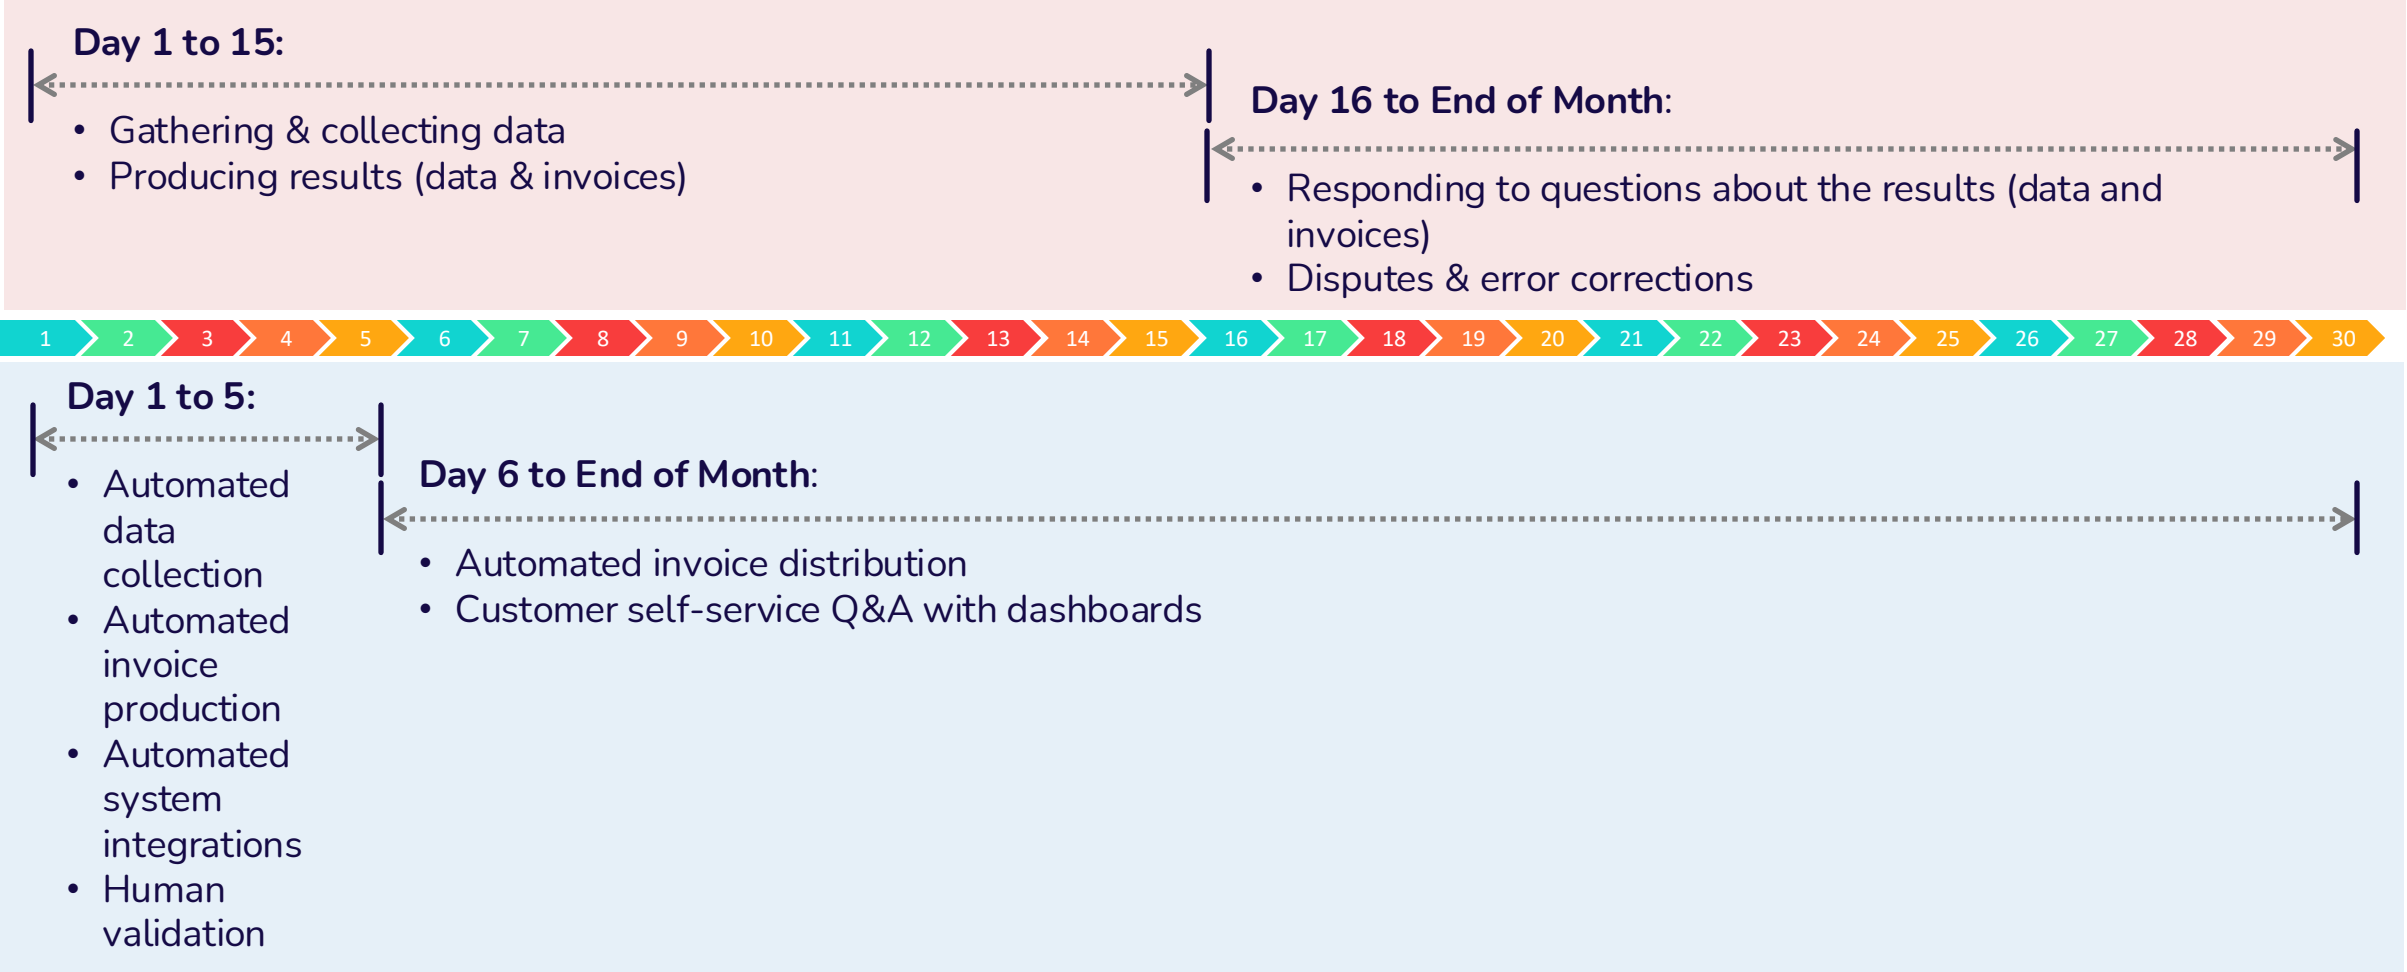

IT Chargeback: Low Maturity

IT Chargeback: High Maturity

Monthly Processing

Capabilities with Maturity Level

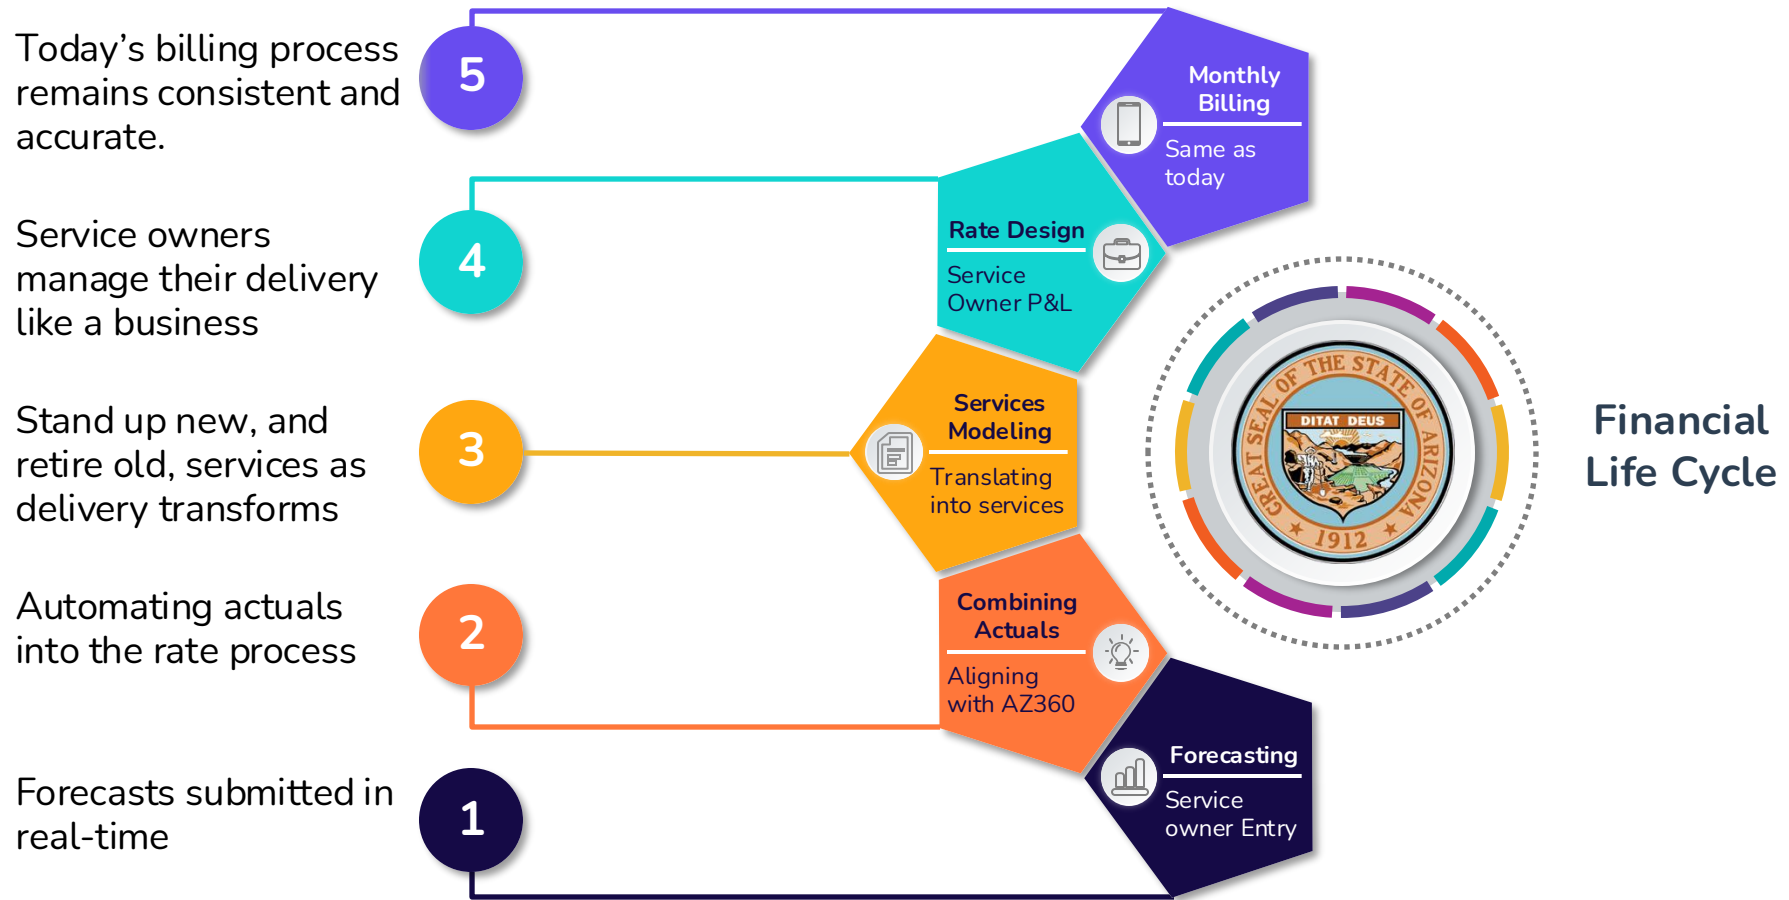

Category	Capability	Maturity Level		
		Low	Medium	High
Data & Calculations	Automated Data Integrations (Bi-directional)		☑	☑
	Advanced Transformation & Validation Rules		☑	☑
	Control Reporting		☑	☑
	Automated Adjustments			☑
	Broad Calculation Capabilities (Methods)		☑	☑
Customer Content	Invoices	☑	☑	☑
	Invoices with Line Item Detail	☑	☑	☑
	Dashboards for Self-Service			☑
	Insights with Service Charges (Units * Rate)	☑	☑	☑
	Advanced Insights (Application & Business Service)			☑
	Automated Dispute Process			☑
Advanced Capabilities	Integrated Planning & Budget			☑
	Demand Management Capabilities			☑
	Cost Modeling (Rate Setting & What-if Scenarios)			☑

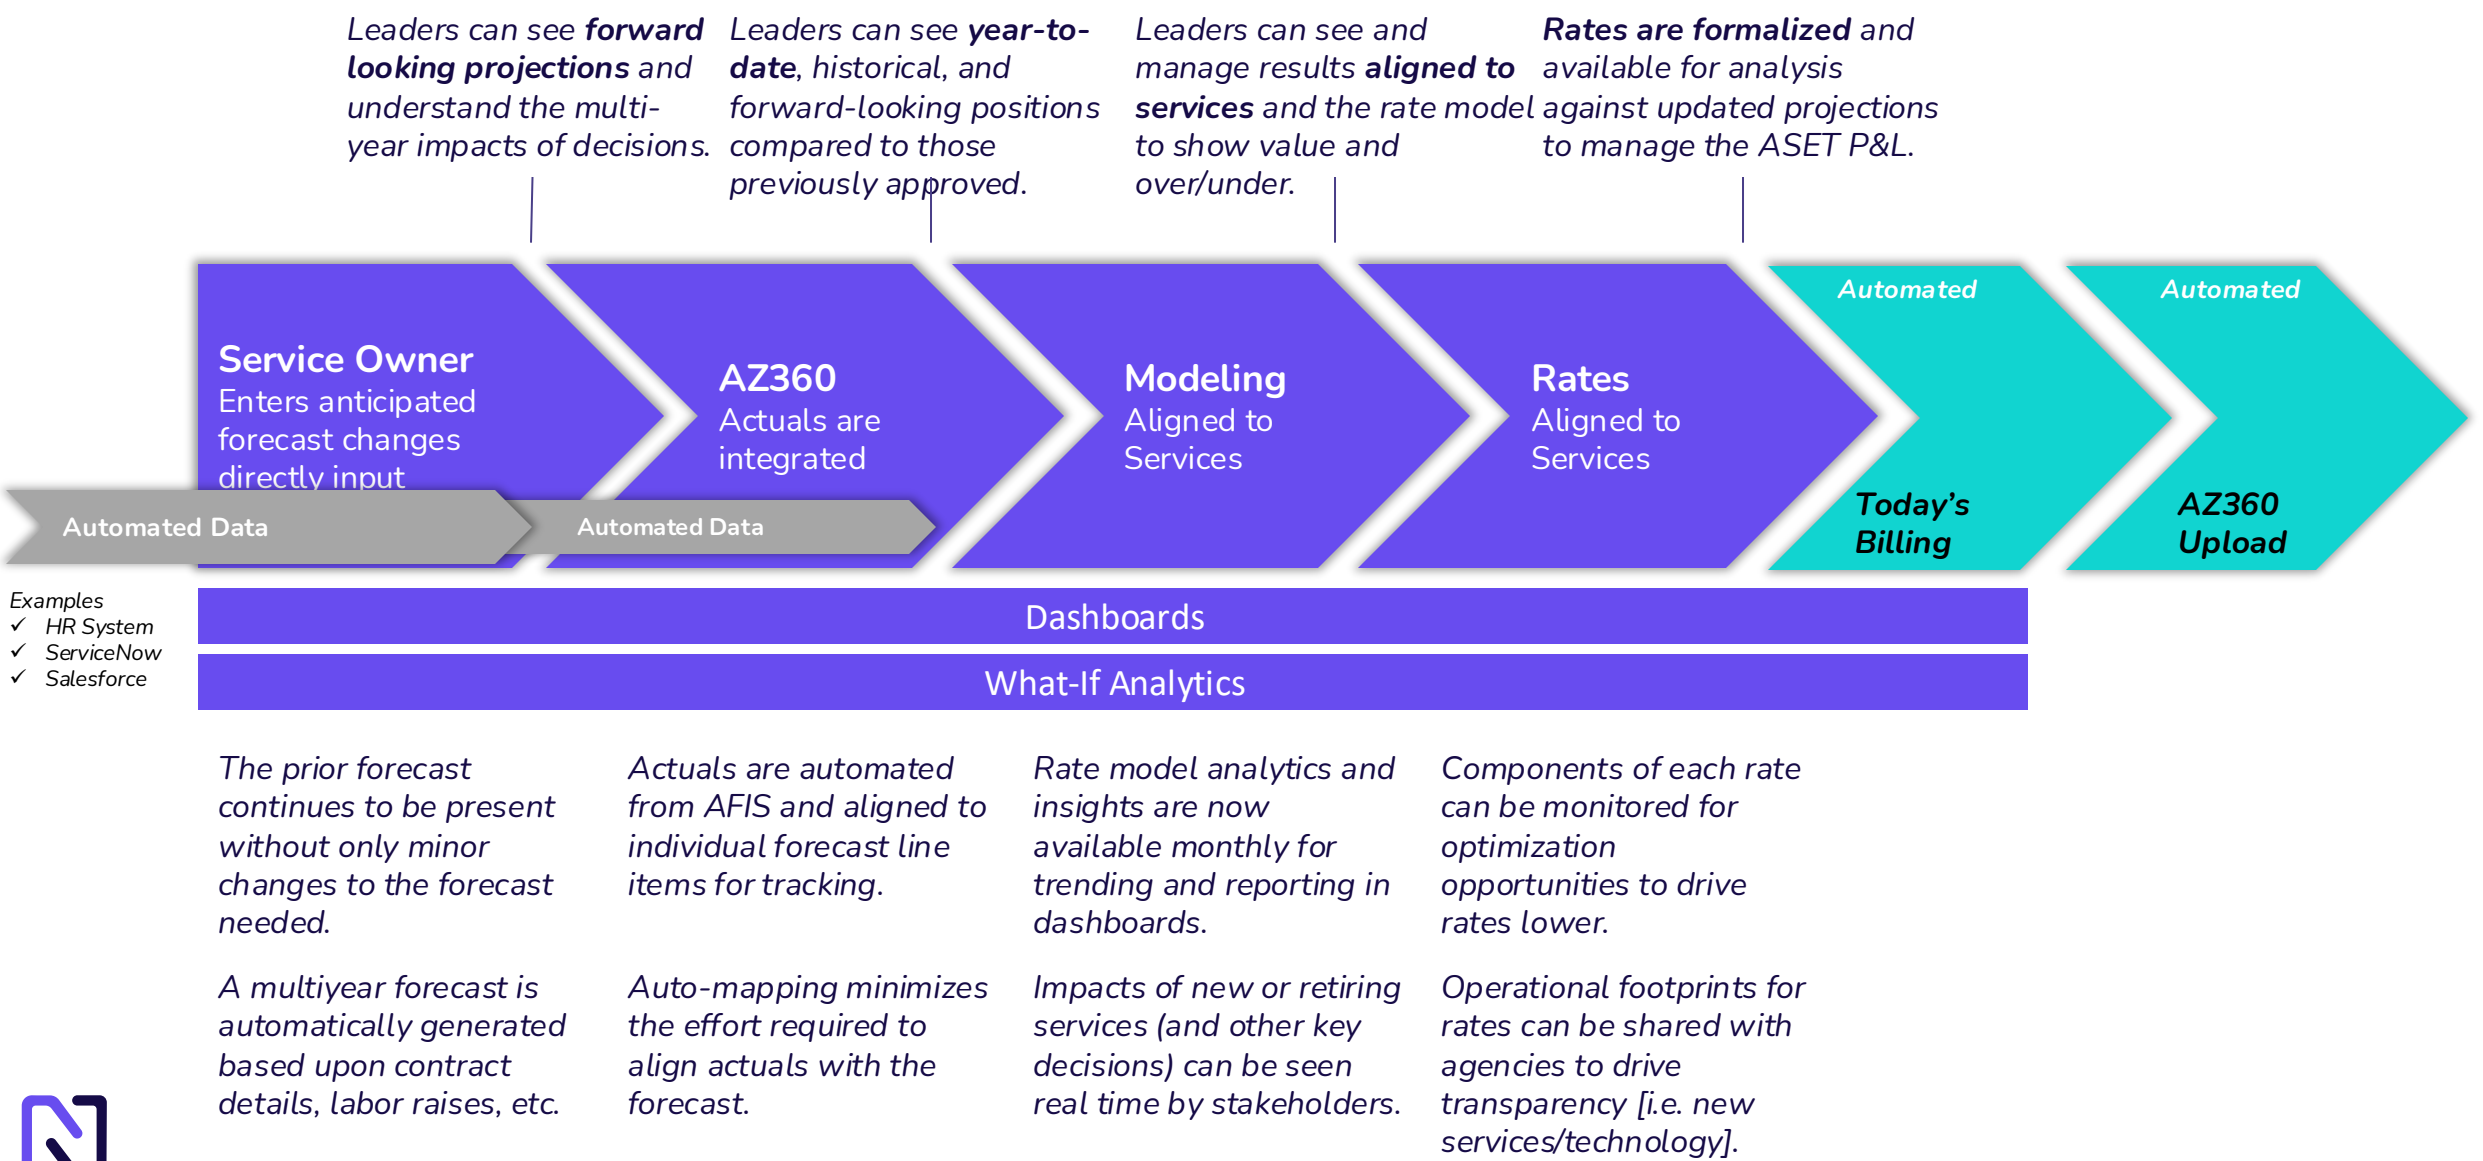

Cost Modeling & Rate Setting

Financial Life Cycle

Roadmap Recommendations

This ITFM roadmap and is **focused on delivering three major capability enhancements** for State leadership.

Aligning transparency through rate design, cost modeling, and billing will reduce effort for Service Owners and drive accountability across leadership.

Focus #1: Unlocking Transparency and Accountability

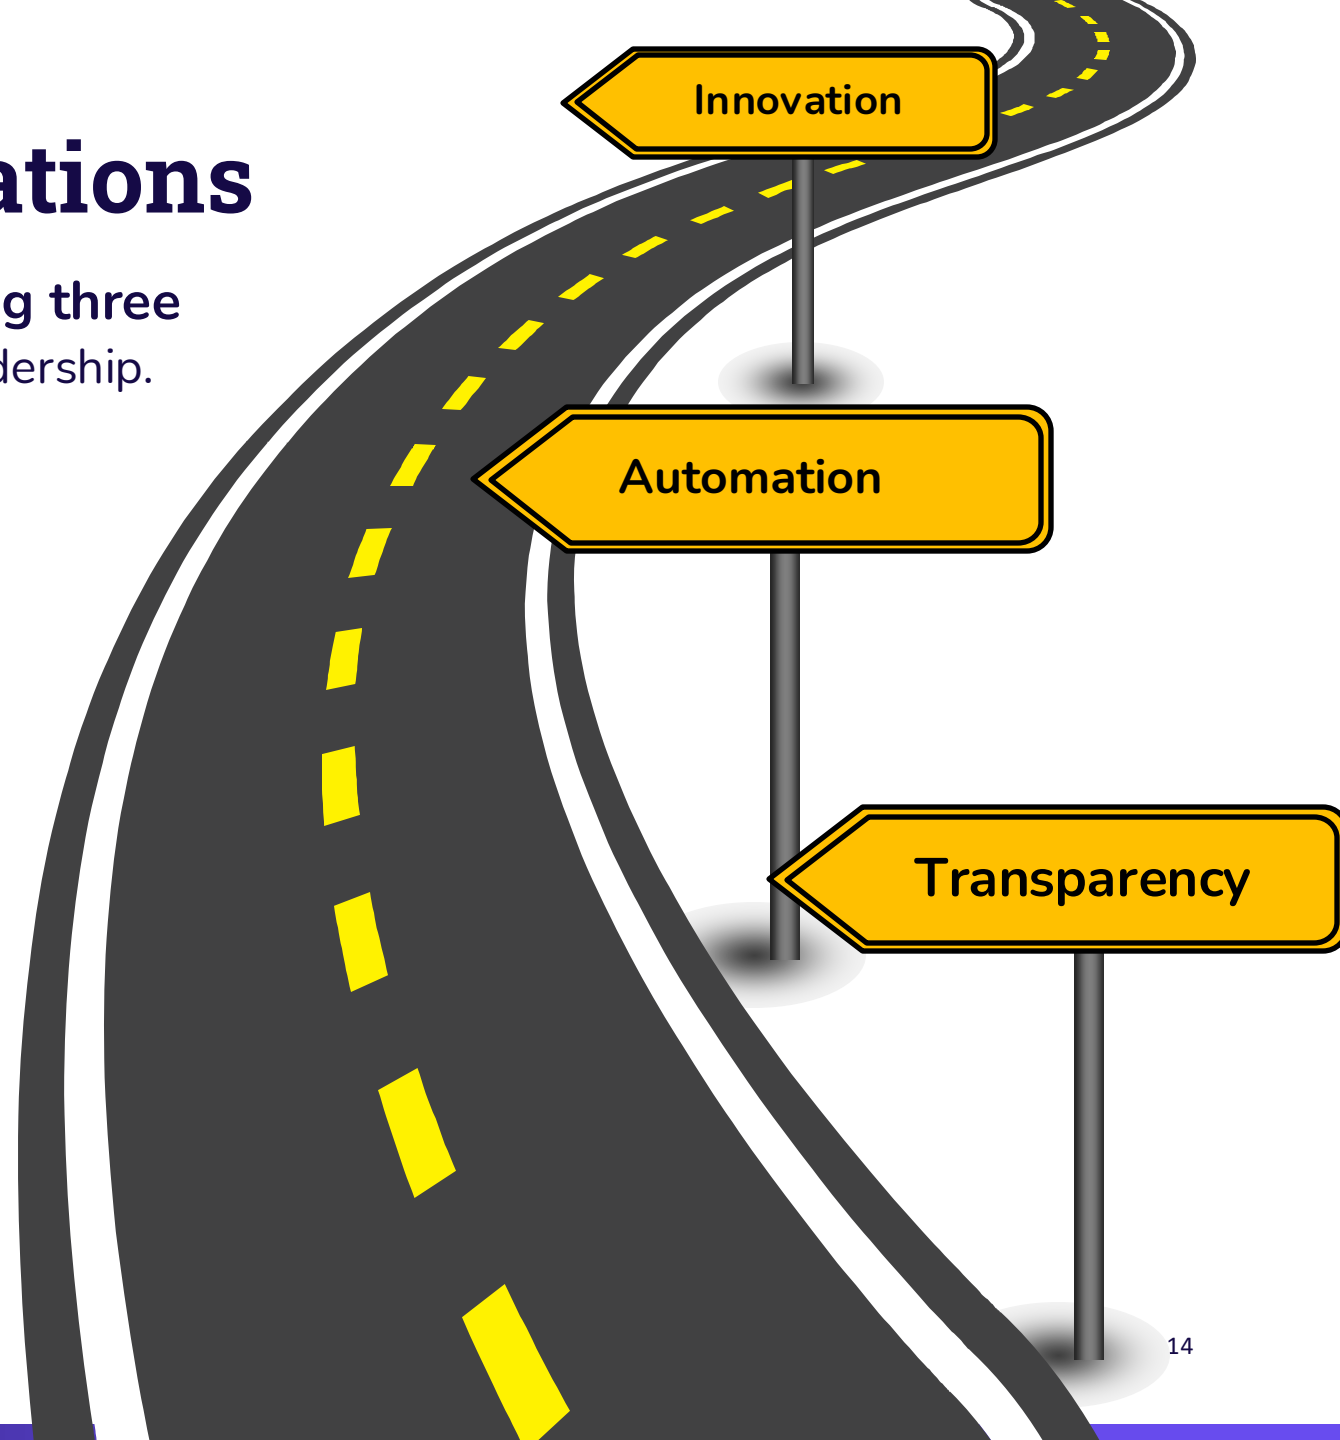

Enable the State to drive reporting and analytics through automated dashboards that show monthly results by service. Results will be consistent with how the book of record billing is presented for agencies.

Focus #2: Automate & Reduce Service Owner Effort

Establish integrations with source systems to remove the need for continuous heavy lifts by Service Owners to manually gather details for cost modeling and automate calculations to further remove effort.

Focus #3: Mature Modeling & Rates to AZ Innovation

Leverage the consistent transparency of cost modeling, rates, and billing to reflect the innovative ASET services that are being provided for the State by relevantly adjusting the catalog.

Rates

- Insights for Rate Approval
- Rate Tracking

Before & After

Before

- Slow cash payments due to billing errors
- Billing inefficiencies – high manual effort to collect data and produce bills – manual approach increases error rates
- Low customer confidence in IT
- IT services are commoditized widgets

After

- Timely collection of cash
- Deep visibility into cost components for rates & delivered services, which results in faster decisions and change
- Higher confidence in IT delivery
- IT services are aligned with customer value & innovation

Conclusions & Final Thoughts

- Stop the Pain Train & Modernize
- Relatively Low Risk
- Improve Billing & Rate Setting/Analysis
- Customer Friendly Services

Q&A
